

Round connectors single-pole, insulated, up to 1000 A

Power transmission and distribution | Single-pole industrial connectors EN

STÄUBLI ELECTRICAL CONNECTORS

Connections for Life

Stäubli, as the international technology leader, offers innovative mechatronics solutions in its four divisions: Electrical Connectors, Fluid Connectors, Robotics, and Textile. At Stäubli Electrical Connectors, we develop advanced connection solutions based on the reliable MULTILAM contact technology.

Together for reliable and safe connections

We know that you entrust us with the functionality of your applications and we work hard to ensure this every single day. Thanks to our high level of expertise, our extensive experience and the multiple successful co-operation with our partners, numerous new developments have originated at Stäubli Electrical Connectors and subsequently have become worldwide standards. This includes our MC4 connector portfolio for which we are today the global market

We create connections for life – and our customers are at the center of these connections. We are convinced that solid and stable partnerships directly contribute to our mutual success.

We take on the needs of our partners and deal with the most extraordinary challenges. As a result, we always create, sell and

leader in photovoltaic. As the Stäubli original, the MC4 represents the result of our constant quest for innovation, quality and safety.

Further examples are the CombiTac modular connector system or the Quick Charging Connector (QCC) for automatic charging systems.

We ensure connections for life together with our long-standing customers in a wide range of industries from renewable energies, power transmission and distribution and E-mobility to industrial automation applica-

support reliable and long-lasting products for markets with the highest productivity and safety requirements in close cooperation with our customers.

tions, railway and welding automation, test and measurement and medical devices.

Thus, developing reliable, efficient and safe solutions based on our proven MULTILAM contact technology, which guarantees a high service lifetime in addition to highly efficient power transmission.

Applications and advantages

These round connectors from Stäubli Electrical Connectors are designed for use in the low-voltage range of temporary power supply, as well as for emergency power suppliers or in industrial environments such as plants, aggregates, or test fields.

Due to their robust design and reliable safety features, they are ideally suited in particular for applications with high requirements under harsh conditions.

For applications in sensitive EMV environments, the shielded variants are used.

Proven MULTILAM contact technology for reliability and safety:

- Highest current-carrying capacity
- Suitable for use to AC 1000 V/DC 1500 V
- High durability (to 5000 mating cycles)

- Plug-and-play bayonet locking
- Mechanical and color coding options

Application example: High-performance connectors ensure an uninterrupted power supply.

General information

Color code

For items which are available in multiple colors, write the two-digit color code after the order number instead of the "*" character indicated in the catalog.

| | | | |
|----|--------------|----|--------|
| 20 | green-yellow | 26 | violet |
| 21 | black | 27 | brown |
| 22 | red | 28 | grey |
| 23 | blue | 29 | white |
| 24 | yellow | 30 | orange |
| 25 | green | 31 | pink |

Changes / disclaimers

All data, illustrations, and drawings in the catalog have been carefully checked. They correspond to our experiences to date, but no responsibility can be accepted for errors. We also reserve the right to make modifications for design and safety reasons. It is therefore advisable not to rely exclusively on the catalog data for designs that incorporate our components, but to consult us to ensure that the most recent data is used. We shall be pleased to advise you.

INTRODUCTION

Proven reliability

The single-pole connectors from Stäubli guarantee maximum operational reliability, compliance with international standards and improved performance for easier operation. They are suitable for use under extreme en-

vironmental conditions and are characterized by a long service life.

The specification varies depending on the type and can be seen in the technical data.

IP2X

Safety and conformity

Our connectors were developed according to **international standards** and offer, among other things:

- **IP2X** touch protection
- Double (reinforced) **class II insulation**

IP65, IP68, IP69

Performance and operation

Depending on the model, the universal connector solution for temporary power supply as well as for industrial applications from Stäubli offers:

- **High current-carrying capacity of up to 1000 A**
- Increased degree of protection: **IP65, IP68, IP69** according to IEC 60529
- High temperature range, from **-60 °C to +120 °C**
- Thorough test procedures, e.g. **salt spray test**

More safety features

Excellent mechanical features combined with proven MULTILAM contact technology make the single-pole connectors the right connection solution when it comes to safety, resistance and durability.

The compact design of the connector and the wide range of cable connection options facilitate commissioning and integration into existing applications.

Robustness and longevity

- **Up to 5000 mating cycles**
- **The patented bayonet locking** makes it easier to connect and disconnect
- **A locking pin or locking ring** prevents accidental disconnection – the connection can only be unlocked with tools.
- **Colored and mechanical coding** increase safety

Easy handling, quick commissioning

The compact dimensions ensure user-friendly operation as well as space savings when integrated into devices. In addition, our single-pole connectors offer:

- Quick and easy mounting and dismantling
- AxiClamp or conventional crimp connection possible (AxiClamp see page 56)

OVERVIEW

Single-pole round connectors, up to 1000 A

The single-pole high-current round connectors are characterized by easy and safe use, robustness and durability. Touch protection as well as high IP protection ensure user safety and enable use in harsh environments. Thanks to the unique MULTILAM contact technology, it scores with unrivaled electrical and mechanical features and has excellent performance thanks to first-class

and constant current-carrying capacity and minimal contact resistance. Its design guarantees extremely durable and reliable electrical contacts; this series allows up to 5000 mating cycles.

The single-pole round connectors are ideally suited for demanding applications, such as in the utilities sector for emergency power

supply, in test fields or in onshore and offshore facilities.

For applications where special requirements for electromagnetic compatibility must be met, we offer shielded connectors.

BAYONET LOCKING

Function of the bayonet locking

Plugging procedure

The plug-in connection comes with bayonet locking. For connecting, the plug and socket markings must face each other. Plug in the connector to the stop, then turn the socket 45° or 90° to the right, depending on the type, until the lock snaps in.

Test procedure

Check whether the lock is engaged by rotating it. Check by pulling whether the connection can no longer be disconnected in this position.

Unplugging procedure

To release, pull back the retractable sleeve of the socket side and turn the plug 45° or 90° to the left, depending on the type, until the markings axially face each other. Disconnect plug and socket.

Note

The larger the cross-section of the connected lead and the shorter the lead length, the greater the force required during the plugging and locking process.

CODING

For round connectors 10 – 21 mm

Mechanical coding

To avoid the risk of incorrect mating, up to 7 different mechanical codes (C1 to C7) are available depending on the type.

The coding differ in the arrangement of the guiding grooves and lugs.

The coding number is engraved on the plug next to the marking.

Only plugs and sockets with the same coding number can be plugged together.

| Connectors | 10BV | 16BL | 21BV | 16BV-GS | 21BV-GS |
|----------------|------|------|------|---------|---------|
| Coding options | 5 | 7 | 6 | – | 6 |

Color coding

Up to 12 different colored encodings are available for faster identification and a more secure connection.

Various choices allow use in all applications (e.g. temporary power supply and industry) and in the colors used on site for wire markings.

| Region | Phase 1 (L1) | Phase 2 (L2) | Phase 3 (L3) | Neutral conductor (N) | Protective conductor (PE) | Reserve |

OVERVIEW ACCESSORIES

A large selection of accessories

More safety features

Microswitch for monitoring the connection status:

- The status of the changeover contact changes when the plug is properly connected
- The user can be notified by connecting the microswitch to an additional warning indicator
- Corresponds to IEC 61984 requirements

Long service life

Stäubli offers protective cover for high ingress protection:

- Protection of the connector in unmated condition (against moisture, dust, mud, oil, chemicals, etc.)
- Increases both the safety and the durability of the MULTILAM contact elements

Optimized operation

For the 16BL connector we offer a 45° angled adapter for more flexibility:

- Compact size allows more cost-effective integration
- Ensures cable strain relief at the connector
- Easier connection and disconnection, especially for larger cables

Also optional on the 16BL is a fixing band specifically designed for attaching to the generator's cable reels. This guarantees safe mounting and easy handling.

Microswitch

For standard conformity and increased safety

Panel receptacle sockets and surface mounting receptacles can be additionally equipped with a microswitch for connection status indication. The microswitch contact

is a changeover contact with 3 flat terminals 2.8 mm x 0.5 mm and a switching capacity of 6 A, AC 250 V.

The microswitch switches immediately before the lock snaps into place, indicating that the plug connection has been made.

Protective covers

Protective covers 16BL-C.../PC

With retaining strap. Used to protect the unmated connectors from dust and water.

The cover easily attaches to the connector. A retaining strap can be used to attach the protective cover to the insulation of the connector.

Protective cover 16BL-C.../PC

For panel receptacle sockets. The protective covers PL-PC-1021SET are spring-loaded hinged covers for covering unmated junction

boxes and protect against mechanical impact, dirt and water spray. Degree of protection IP65

The protective cover can be locked with a padlock (not supplied by Stäubli). The color coding is done with color coding disks.

Fixing bands with protective cover

For safe and easy attachment of connector 16BL-CP and 16BL-CS by attaching them to the cable reel or other attachment points.

| Order No. | Type | Suitable for | Page |  Assembly instructions |
|-----------|-------------|--------------|------|---|
| 15.5884 | 16BL-CP/FIX | 16BL-CP.. | 27 | MA408 |
| 15.5883 | 16BL-CS/FIX | 16BL-CS.. | 26 | MA408 |

Microswitch

The use of a locking device (e.g. microswitch) prevents connection under load and ensures that the user complies with the requirements of the IEC 61984 standard.

The 16BL-PP/ET-C can be equipped with a microswitch that indicates the status of the plug-in connection.

The microswitch is a changeover contact with 3 flat terminals 2.8 mm x 0.5 mm. It switches immediately before the lock snaps into place, indicating that the plug connection has been made.

Specified:

- For IEC: 6 A, AC 250 V
- for UL: 5 A, 125/AC 250 V
1 A, DC 48 V

| Order No. | Type | Suitable for | Page |
|-----------|-------------|--|------|
| 14.0106 | MSW-16BL-PP | 16BL-PP/ET-C... mounted with 2 screws (included in scope of delivery) | 28 |

Angled adapter

The WA-ID/S21 angled adapter is an additional element that enables more space-saving mounting of the ID/S21-C... and 16BL-PP/ET-C... models than the standard version.

It also minimizes the transverse forces caused by the lead that can influence the plug. Degree of protection IP65

Note to IP65:

Please contact Stäubli if the operating altitude exceeds 2000 m above sea level.

| Order No. | Type | Suitable for | Page | Degree of protection |  Assembly instructions |

| 14.0050 | WA-ID/S21 | 16BL-PP/ET-C... | 28 | IP65 | MA075 |

ADAPTER 16BV – 16BL

Compatibility with existing 16BV systems

Integration from a 16BL connector to an existing 16BV system

The 16BL can easily be integrated in an existing system using an adapter solution. Different sets are available for all applications (see page 34.)

Replacement of the 16BV surface mounting sockets connector

The replacement of ID/... connectors with the new 16BL connector is easy and possible without further adjustments.

The drilling plan dimensions are identical. Additional mounting screws on the front flange add to stability and reduce the mechanical load after coupling.

Drilling plan 16BV

Drilling plan 16BL

Adapter 16BV – 16BL

Plug-and-Play-Adapter for compatibility with existing 16BV systems

ADAP/16BV/16BL/SET4/EU – set for Europe, type: 16BV plug/16BL plug

Existing 16BV systems can be quickly and easily connected to the new 16BL connectors by using the related plug-and-play adapter.

The right choice for your application must be made according to the configuration of the installation.

Depending on the plug combinations primarily used in the different regions, various adapter sets are available. Each set consists

of the appropriate number of adapters depending on the number of conductors used regionally.

Special versions can be manufactured on request.

Note:

Prior to ordering, please check if the cable of the standard-Plug-and-Play-Adapter meets your application conditions.

Criteria such as temperature, chemical resistance or frequency level must be considered with particular care.

If you need assistance, please contact your local Stäubli partner.

¹⁾ Mechanical coding is considered only for the 16BL connectors

²⁾ Pre-assembled, with crimp connection, cable type class PUR 5, cross-section 240 mm²

Protective cover PL-PC

For panel receptacle sockets. The protective covers PL-PC-1021SET are spring-loaded hinged covers for covering unmated junc-

tion boxes and protect against mechanical impact, dirt and water spray. Degree of protection IP65

The protective cover can be locked with a padlock (not supplied by Stäubli). The color coding is done with color coding disks.

¹⁾ Not a stock item. Delivery date upon request.

Angled adapter

The WA-ID/S21 angled adapter is an additional element that enables more space-saving mounting of the ID/S21-C... and 16BL-PP/ET-C... models than the standard version.

It also minimizes the transverse forces caused by the lead that can influence the plug. Degree of protection IP65

Note to IP65:

Please contact Stäubli if the operating altitude exceeds 2000 m above sea level.

| Order No. | Type | Suitable for | Page | Degree of protection |  Assembly instructions |

| 14.0050 | WA-ID/S21 | ID/S21-C... | 38 | IP65 | MA075 |

Microswitch for 21BV

Panel receptacle sockets can be additionally equipped with a microswitch for connection status indication. The microswitch

is a changeover contact with 3 flat terminals 2.8 mm x 0.5 mm and a switching capacity of 6 A, AC 250 V.

The microswitch switches immediately before the lock snaps into place, indicating that the connection is closed.

CUSTOMER SPECIFIC CONFIGURATION

Cable assemblies according to your request

Let the experts do it for you!

Discover our custom cables to meet your needs. Enjoy the convenience of a simple selection configuration and save on special tools, time and resources.

Our solutions are technically compatible and ensure safe installation by professionals. Get everything from a single source for hassle-free integration.

In short, our turnkey solution gives you multiple benefits at a glance.

Note
For safety reasons, the connectors are automatically supplied with the appropriate protective cap. For warranty reasons, the assembly of connectors from other manufacturers remains the responsibility of the customer, please select the “cut end” option.

Note
The cable insulation material can affect and reduce the electrical performance of the assembly. Stäubli connectors are compatible with CU conductor class 5 or 6. Special requirements such as aluminum on request.

INTRODUCTION

Shielded connectors

For power supplies with frequency converters, e.g. for driving three-phase motors.

Range of application include, for example, in deep drilling rigs for geothermal drilling and in energy chains of crane systems.

The 16BV-GS connector was developed based on the proven 16BV round connector.

The continuous shielding reliably protects against electromagnetic interference.

The 16BV-GS is IP2X touch protected.

The bayonet lock and color coding ensure secure connection. An optional microswitch

takes over the connection status indication.

In addition to color coding, the 21BV-GS has mechanical coding to prevent incorrect mating (C1...C6); this is especially beneficial in poorly lit working environments. With the 16BV-GS this functionality is offered on request (C1...C6).

With a high operating temperature of 120 °C and a rated current up to 600 A, this connector meets the most demanding application requirements.

Areas of application:

- Drilling equipment
- Automobile testing facilities
- Equipment for test benches
- Railway technology
- Industrial applications in harsh environments such as oil and gas, steel industry, etc.

Hook wrench for 16BV-GS, 21BV-GS

Unlike standard hook wrenches, the Stäubli hook wrench ensures damage-free tight-

ening and loosening of anodized fastening nuts due to soft contact surfaces.

With pins according to DIN1810B, Size 80–90.

CRIMPING

Crimping

It is recommended to use an ELPRESS hexagonal crimp. The Stäubli crimping sleeves and the dies from ELPRESS are designed for crimping flexible Cu conductors of class

5¹⁾ and 6¹⁾. The crimping tools can be purchased from third-party suppliers.

Notes for crimping with crimping sleeves

For shielded connectors 16BV-GS

Stäubli recommends ELPRESS hexagonal crimping. The dimensions of the crimping sleeves, and the crimping inserts supplied by ELPRESS, are designed for crimping class 6¹⁾ flexible conductors (Purwil).

In response to the increased use of class 5¹⁾ leads with reduced flexibility and therefore a smaller conductor diameter (e.g. H07RN-F), a new range of connectors with a crimping sleeve designed for use with these leads has

been added to our product range. The new crimping sleeves guarantee a perfect connection in terms of both contact resistance and pull-out strength.

Crimping sleeves for sockets and plugs with bayonet locking KBT16BV-NS... and KST16BV-NS... for flexible cables class 5¹⁾ and 6¹⁾

³⁾ 2 crimpings required

AxiClamp: a simple and innovative cable connection alternative

The patented cable connection system for electrical and mechanical connection of Cu conductors 6 mm² – 300 mm² class 5 and class 6 according to IEC 60228.

The individual strands of the connecting cable are screwed against a metal cone by means of a conical screw sleeve and clamped tight. The metal cone is part of the contact body. This results in a solid clamp

connection that offers equivalent contact resistances as the crimp connection and has additional advantages.

Electrical and thermal tests:

IEC 61238-1:2018, (VDE 0220 part 100), compression and screw connectors for power cables for rated voltages up to and including 30 kV (U_m = 36 kV)

Mechanical tests:

IEC 60068-2-6:2007-6, environmental tests, Fc tests: Oscillating, sinusoidal.

Test parameter:

- g-strain 10 g
- Amplitude: 0.75 mm
- Frequency: 10 to 500 Hz
- Time: 3 x 112 min.

Benefits of the AxiClamp system

- Possible to mounting with standard tools
- Reusable many times
- Compatible with various cable cross sections
- Time and cost savings

Assembly instructions MA048, MA408

www.staubli.com

Choice of connector because of the cable used

The cable must fit the connector during crimp connection, i.e. the Cu single conductors should be held securely in the matching crimp sleeve and the insulation should be permanently fixed in the cable gland. To deal with the different flexible Cu cable

types (class 5 and 6 according to IEC 60228) that are on the market, we have also developed 2 different connector types for the 16BV series.

The difference between class 5 and class 6 is flexibility. Class 6 cables have a higher

flexibility due to the smaller cross-section of the individual strands.

| | Flexible conductor, class 5 | | | Flexible conductor, class 6 | | |
|-------------------------|---|----------------------------------|---------------------------------|---------------------------------|----------------------------------|---------------------------------|
| | in accordance with IEC 60228 (e.g. H07RN-F) | | | according to IEC 60228 | | |
| Conductor cross-section | largest Ø of the single strands | outside-Ø of the crimping sleeve | inside-Ø of the crimping sleeve | largest Ø of the single strands | outside-Ø of the crimping sleeve | inside-Ø of the crimping sleeve |
| mm ² | mm | mm | mm | mm | mm | mm |
| 50 | 0.41 | 14 | 10 | 0.31 | 14.5 | 11 |
| 70 | 0.51 | 16 | 12 | 0.31 | 17 | 13 |
| 95 | 0.51 | 18 | 13.5 | 0.31 | 20 | 15 |
| 120 | 0.51 | 19 | 15 | 0.31 | 22 | 17 |
| 150 | 0.51 | 22 | 17 | 0.31 | 25 | 19 |
| 185 | 0.51 | 24 | 19 | 0.41 | 27 | 21 |
| 240 | 0.51 | 26 | 21 | 0.41 | 30 | 24 |

If the cable type cannot be assigned to classes 5 or 6, the dimensions of the crimp sleeves and cable glands, which are

specified for all connector types, must be matched to the cable data.

Notes to crimping, see page 54.

Technical data

Extraction and plugging force

Stated values are forces after 20 to 30 actuations and with thin lubricant film. The forces are higher when parts are new.

Tightening torques

The torques apply to clean, lightly greased bolts, nuts and washers.

Rated current (IEC 61984)

Current value determined by Stäubli that the connector can conduct continuously and simultaneously through all its contacts connected to the largest specified conductors (without interruption), at an ambient temperature of 20 °C, without exceeding the upper limiting temperature.

Rated voltage (IEC 61984)

For connectors, the voltage determined by Stäubli to which operating and performance characteristics refer.

Note: A connector may have more than one rated voltage value.

Contact resistance

Is the resistance occurring at the point where two contact areas touch. Its value is calculated using the measured voltage drop at the rated current.

Test voltage

Is the voltage that a connector can withstand under the determined conditions without breakdown or flashover.

Short-circuit current

according to IEC 60909-0:2016

Insulation coordination

In accordance to IEC 60664-1:2007 The values in the tables indicate the rated impulse voltage in kV and the pollution degree.

| Initials | Material designation | Temperature |
|----------|-------------------------|------------------|
| PA | Polyamide | -40 °C...+80 °C |
| POM | Polyoxymethylene | -40 °C...+100 °C |
| PA66 | Polyamide 66 | -30 °C...+120 °C |
| PA6 | Polyamide 6 | -30 °C...+90 °C |
| TPE | Thermoplastic elastomer | -40 °C...+100 °C |
| PE | Polyethylene | -15 °C...+90 °C |
| PP | Polypropylene | -15 °C...+90 °C |
| PVC | Polyvinyl chloride | -15 °C...+80 °C |
| CR | Neoprene | -20 °C...+80 °C |
| PUR | Polyurethane | -40 °C...+80 °C |

Lubricants

Stäubli recommends the following lubricants:

Grease (general elec. contacts):

- Klüberemp GR UT 18 – 100 g (73.1059)
- Grease in SF6 gas:
- Barrierta I EL-102*

Assembly and sealing grease:

- Barrierta I S-402 or Barrierta I MI-202*

Mating cycles

The maximum mating frequency of the standard connectors is 5000 depending on the operating conditions and when using protective covers in unmated condition. This requires a thin lubricant film on the contacts before the first plugging procedure. Higher mating cycles put stress on the surface, the guide and the lubrication, and always necessitate special clarifications and special versions.

Crimp connection

For conductor connections, we recommend hexagonal crimping for our crimping sleeves. Notching is possible. Our crimping sleeves are designed for highly flexible Cu leads. For other types of leads, special crimping sleeves are required. Stäubli recommends ELPRESS for all highly-flexible Cu conductors.

Note: Stäubli also manufactures fully pre-assembled leads and cables!

Safety instructions

Basic protection against electric shock (IEC 61140:2016)

Hazardous-live-parts shall not be accessible and accessible-conductive-parts shall not be hazardous live either:

- under normal conditions (operation in intended use, and absence of a fault) or
- under single-fault conditions.

Extracts from IEC 61984: 2008 and remarks

1) Plug connectors

Contacts are not under voltage or under load/current when connecting or disconnecting. An electrical or mechanical lock can prevent contacts from becoming live before the connector is plugged in or pulled out. A lock can be obtained with a microswitch.

Protection against electric shock for unenclosed connectors

Protection is ensured by the customer in the final product in which the connectors are installed, or a safety extra-low voltage (SELV) shall be applied.

Protection against electric shock for enclosed connectors

Mated condition: Clearance and creepage distances are measured between live parts and the IEC test probe with a test force of 20 N.

Unmated condition, contact openings: Clearance and creepage distances are considered.

For a plug connector with breaking capacity, clearance and creepage distances are measured through the openings between the live parts and the plane of the mating face.

IEC 61984 “Connectors – Safety requirements and tests”

This international standard applies to connectors with rated voltages from 50 V to 1000 V and rated currents up to 125 A per contact and for which either no detailed specification (DS) exists or for which the DS refers to this standard for safety aspects.

2) Connector system

When connecting or disconnecting, contacts are live only; however, contacts are not under load, and carry no current. Plug devices must have the stated breaking capacity or must be so designed that they can only be connected and disconnected in the absence of load (without current). This can be achieved with a lock, e.g. a microswitch. A microswitch can be installed on the fixed part of the plug connector.

Mated condition: Clearance and creepage distances are measured between live parts and the IEC test probe

Unmated condition: Contact openings: clearance and creepage distances are measured between live parts and the plane of the mating face. Does not apply to the male part of the connector.

3) Connector system (CBC)

(CBC = connector with breaking capacity). Contacts are live and current (load) flows through the contacts when connecting or disconnecting. Stäubli connectors are not suitable for connection or disconnection under load. No breaking capacity can be specified.

Derating diagrams

The current carrying capacity of a connector cannot exceed that of the connected conductor (and vice versa)

The diagrams show the rated current of the respective connectors according to various ambient temperatures.

Derating for electrical machines

If the connectors are used in electrical systems with machines, the IEC 60204-1 (VDE 0113 Part 1) standard "Safety of machinery" is applied instead of VDE 0298-4. This specifies the permissible current-carrying capacity of PVC-insulated copper cables under continuous current in machine use, at

an ambient temperature of 40 °C. For bundled leads and cables, additional reduction factors apply under these conditions.
